Charges for 2012-2013 College of Engineering Information Technology Committee

Members
Sarah Vigmostad (Chair) May 2013
George Constantinescu May 2014
Mona Garvin May 2015

Term Expiring

General Charge
The Information Technology Committee shall be responsible for reviewing and evaluating policies governing hardware, software, and computing services within the college, and for making appropriate recommendations regarding computer resources to the dean and the faculty.

Specific Charges

1. Meet with the DEO of each Department to get their input on issues involving the deployment and use of information technologies and services to support the teaching and research missions of the college. Where appropriate, arrange to attend departmental faculty meetings to facilitate broader discussion with the faculty. Report the results of these meetings and discussions back to the EFC.

2. Work with the College of Engineering Teaching Committee to identify any new or special information technology needs associated with the incorporation of universal design for learning concepts into College of Engineering courses.

3. Consider possible expansion of the role of the Information Technology Committee to include evaluation and review of the entire scope of the newly constituted Engineering Technology Center (ETC). Recommend whether or not such an expansion in scope is warranted and, if so, whether an expansion of the membership of the committee to include a representative from each department or program would be appropriate.
